

HOW DO YOU SORT AT LUNCH?

We are kicking off the Trash Free Lunches program at your school! Students are learning to sort lunch items into the following bins to help reduce waste, save money for your school and care for the environment!

STEP
1

EMPTY Liquids from milk and juice cartons

Empty the milk & juice containers so that they are clean when recycled!

STEP
2

Plastic items, cans, bottles, clean napkins & cartons

70% of what is in our trash cans can be recycled: all clean plastics, glass, metal and paper products.

STEP
3

Place your tray in the tray stacker

Each trash bin liner costs 26 cents. Stacking trays helps us save room and reduces the number of liners used.

STEP
4

Leftover fruits & veggie scraps

Apple cores, orange peels and other fruits and veggies scraps are composted and turned back into soil.

STEP
5

Food waste, flimsy wrappers and snack bags

By the time we get to the trash can, we've reduced waste and decreased what we put in the trash bin to help save money and the environment!
