

# Welcome to the Elementary Computer Lab!

The two main programs that we use are Istations and IXL (Math).

**Istations** is a fun program that is used to determine a student's overall estimated reading ability index. The students are tested monthly and their scores will identify students who are potentially at risk. This is a great tool for teachers so they can identify students that need extra help and place them in small groups to address their needs.

**IXL** is our math program that is broken down according to the TEKS. The students can login to IXL and work on math problems that mirror what they are working on in their classroom. Students are also allowed to use this program at home.

To login from home sign in at [www.ixl.com/signin/elkhart](http://www.ixl.com/signin/elkhart). Students have been assigned a username and password at school that will allow them to log on to the site. If you need your student's information you can contact his/her teacher.

## For Kindergarten:

The students are enrolled in ABC mouse ( [www.abcmouse.com](http://www.abcmouse.com) ). The students can also login to this program at home for extra practice. Contact your student's teacher for username and password information.
