

1.20 SCHOOL PHILOSOPHY AND PURPOSE**1.20**

Excellence in education involves the development of the whole child. The school is committed to providing an atmosphere in which confidence, responsibility, self-discipline and sound moral values are fostered. Such an education is stimulating and fun for the students and their teachers; extending them in a clean, secure, physically attractive environment.

These goals are achieved with a broad, bi-cultural curriculum served by the best resources, appropriate educational technology and in particular, by providing truly excellent teachers.

The school is firmly linked to the community to maintain local values while developing a global outlook through our multi-national character. Practical activity is the cornerstone of our learning in academic disciplines as well as in sport, outdoor activities, ecological studies and artistic development.

To serve the aims of this exceptional educational community, a highly effective administration provides communication, records progress and ensures quality at all levels of the organisation.
