Google Classroom

A glimpse into the future

FAQ

Why Google Classroom?

We will use Classroom in order to post our assignments, any handouts, provide feedback for any graded assignments, etc.

This will work in tandem with your website, as you can use your website to provide a full calendar of assignments whereas your Classroom will be an easier place for you to organize your materials.

Google Classroom continues to be updated so look forward to new features as the school year progresses.

Will this provide feedback to students?

Similar to Aspen, this will provide feedback to students. You can grade assignments and then notify the students once their assignment has been graded with a click of a button!

Where do all of the assignments come from/go?

All assignments are created from files that you upload – either directly from your drive, from your computer, from youtube, or from an external website.

Is Google Drive compatible with Google Classroom?

It is – in fact, when creating a new class in Google Classroom, a new Classroom folder will be created in your drive where all assignments will be posted and submitted.

How do I get started?

It is VERY straight forward – while logged in to your FAMS account, visit classroom.google.com and at the top right, click the plus button to add a new class.

You **do not need to do anything more** than give your students a student access code – on the first day of school, students can enter this access code, and voila! They are added to your class roster.

Can I add another teacher to a class?

You sure can! Click on the “About” tab and on the bottom left, click “invite teacher.”
