

The LEGO® Education Model Schools Program recognizes exemplary elementary schools across the United States where every school day fosters creative problem solving and 21st-century skills development. These schools meaningfully incorporate the LEGO brick into their classrooms to achieve astounding learning outcomes across subjects. The Model Schools title is awarded by LEGO Education to honor well-rounded, high-impact learning environments that celebrate creative problem solving and ignite learning for every student.

Throughout our partnership, the leadership and staff of this outstanding elementary school have demonstrated success in infusing hands-on learning throughout their curriculum while providing a strong vision to deliver the best possible outcomes for all students. This is why we are proud to announce Jesse S. Bobo Elementary School as the first designated LEGO Education Model School in the nation. We look forward to embarking on this endeavor with the administration, educators, parents, and students of this school, strengthening our relationship and working together to create the next generation of creative thinkers and problem solvers.
