

Computers

BY NICK CARLETTELLO AND JACOB MARQUEZ

The purposes for computers

The purpose of computers:

- To extend our thinking*
- To solve problems*
- To crystalize conceptual understanding*

Inventor of the computer and Innovation of the computer

- Charles Babbage is the inventor of the computer in 1822*
- A innovation for the computer was the laptop*

An area of technology that best classifies the computer

A area of technology that best classifies the computer is in information and technology because when you type something in a computer, in the internet you will get information about it fast and the computer is a product of technology.

Ways computers impacted society in a positive and negative way

Positive:

- Easy information access*
- Automated Machinery*
- Fast accurate data*

Negative:

- Sedentary Lifestyle*
- Family and Leisure Interruptions*
- Loss of Privacy*

How science, technology, engineering, and math used in the creation of the computer

- Science: Science is used for constant improvement*
- Technology: It has a lot of technology inside*
- Math: Everything that composes the computer math is involved in some way*
- Engineering: The parts inside of the computer are in a certain way to make it work*

Changing the computer

I would change the computer by making it not use that much data and it would connect to the wifi from farther away.

The End
