Wizbots After School Robotics Labs are a great way to dabble in robotics programming and design for the first time or build on existing skills. Using **LEGO® robotics** and **Java coding**, our unique, project-based curriculum exercises both creativity and problem-solving to teach engineering, programming, math and physics in a hands-on, collaborative way. Parents can experience all the fun too with student project videos posted online to see and share!

*The Union School District is not a sponsor of this event.*
