TECHNOLOGY NEWSLETTER

This Newsletter is the first in what will become a communications sharing of the Technology Strategic Planning initiative that is planned over the next three to five years.

We plan to share updates as they are warranted in order to keep everyone abreast of the progress toward our goal.

The goal of the Technology Strategic Plan is to ultimately become a WiFi specific operation allowing students connectivity with learning materials throughout the District.

In order to achieve this goal, there are multiple major and minor steps to be determined and implemented over the planned period.

We have completed Step one which is a survey of the basic technology infrastructure (access points and switches you don't see) in each of the buildings. This survey is instrumental in identifying the current capabilities and deficits of our ability to connect to the network when there are so many wireless devices in use in the buildings.

Items that are initially on the table for the future development of the implementation plan include:

- Development of a sequence timetable which is both expedient and achievable within the budget and timeframe of the plan;
- Determining the hardware required in conjunction with the parameters to be established by Teaching and Learning across the District;
- Determining other appropriate resources for identified grade levels to support the programs selected by Teaching and Learning;
- Instruction and Communication to Staff on the use of technology in the classroom;
- Determining the transition timetable of both classroom equipment and utilization of new processes in the educational environment.

We are excited to be able to share this mission and vision with the District and to continue to help in the improvement of the educational environment for our students.
