

Conversion Between the 2400-Point SAT and the New 1600-Point SAT

To use this chart, find your old scores from the 2400-point SAT. These may be from an official SAT you already took, or from practice SATs that still used the 2400-point scoring scale. Locate your score on the chart, under the "Old Score" column. **Then, look at the number immediately to the right of that score** (under the "New Score Conversion" column). That is roughly the score you'd receive on the new SAT with its 1600-point scale.

This chart was created by taking the old 2400-scale scores and multiplying them by two-thirds (because 1600 is two-thirds of 2400). So, if you got a score of 1940 on the old SAT, you'd multiply it by two-thirds and get a score of about 1290. This is roughly what you'd get on the new SAT with its 1600-point scale.
