

# WATER DISTRIBUTION OPERATOR (D 1)

Water Distribution Operator  
February 26—May 2

M/W

6:00PM-9:00PM  
Room 32 DMHS

**Water Distribution Operator** performs a variety of skilled work associated with general oversight, construction, maintenance and emergency repair of a water distribution system which includes pipelines, metered water services, reservoirs, tanks, pump

stations and pressure regulating facilities. This 54-hour course teaches the basic principles of operation and maintenance of a water distribution system. The course covers the sources of water; installation, operation and maintenance of pipes, pumps, valves, meters, and other regulated hydraulic units. This course is designed to prepare the student to take the State of California **Water Distribution Operator** exam. Students will have access to training materials.

Take advantage of the timing and start your water industry career path right now! **The choice is clear! Great pay, benefits, retirement and an excellent career in the Water Industry are waiting for you!**
