Cubism Overview:

- Cubism was a revolutionary avant-garde art movement developed around 1907 in Paris. Pablo Picasso and Georges Braque from 1907-1920s.
- Cubism was developed by Pablo Picasso and Georges Braque.
- Cubism was the first abstract style of modern art.
- A Cubist painting ignores the traditions of perspective drawing and shows many views of a subject at one time.
- The Cubists were influenced by art from other cultures, particularly African masks.
- Cubists wanted to make pictures that reached beyond the rigid geometry of perspective.
- A typical Cubist painting depicts real people, places or objects, but not from a fixed viewpoint.
- Instead it will show you many parts of the subject at one time, viewed from different angles, and reconstructed into a composition of planes, forms and colours.

Cubist inspired photography project

1. Use a Campi Stock Image or take a picture of a person, place or object.
2. Open it in Photoshop
3. Use the Marque tool or Polygonal selection tool to select objects or elements in the photo.
4. Press Command/Control + J to copy them to their own layer.
5. Use the Move and/or Transform tool to rotate or skew the section you copied, and add an optional Drop Shadow or Level Adjustment
6. Fill the photo with altered elements, that break the rule of perspective.
7. Make a neutral color Textured background and turn off the visibility of the main photo.

Guitar and Fruit Dish, 1909 Georges Braque
