

VPN settings preventing internet connection.

Students should NOT configure a VPN on their iPad. This will cause delays in the proper routing of your internet connection.

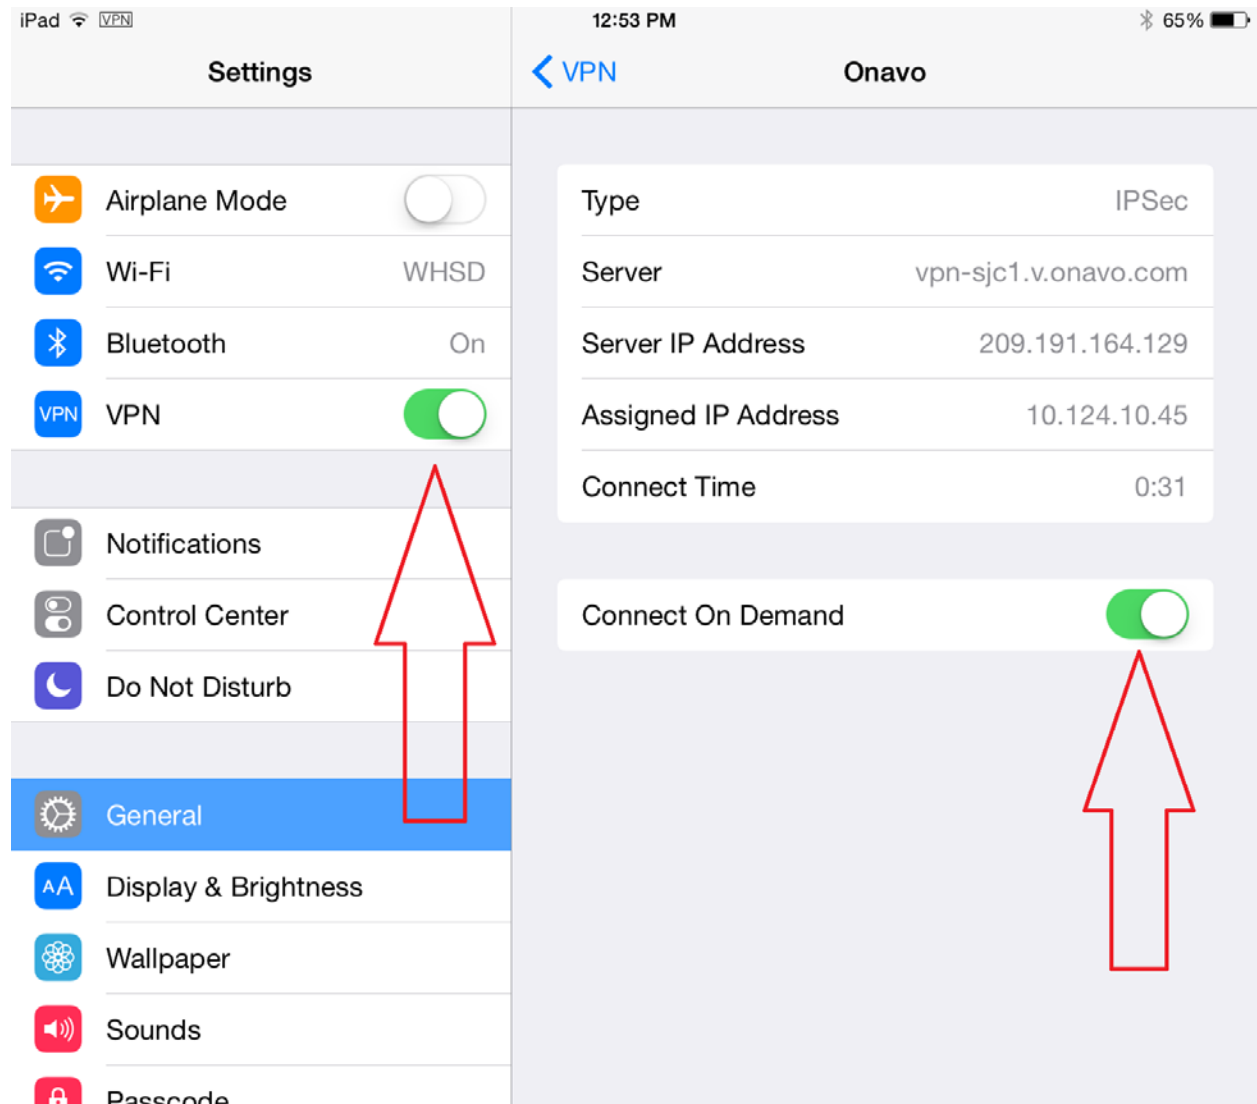

You can tell if you have a VPN configured by this icon.

To remove this go to “settings”. On the “General” tab, “VPN”

Move both sliders to the "OFF" position and remove any VPN applications such as "Onavo".

If you encounter any issues. Please contact

Mr. Roger Cowder
