

LiveWell Kids is a nutrition and garden education program provided by Beach Cities Health District in partnership with your school to combat childhood obesity through healthy and mindful behaviors.

Celebrations are everywhere! It seems every month there is a birthday party, a school celebration and a holiday. Common to these celebrations are sweets and junk food. As a result, these normally once-in-a-while treats are becoming everyday snacks, which add low-quality foods, like sugar and preservatives, to our diets. Serving healthy snacks is integral to providing good nutrition and supporting lifelong healthy eating habits. Here are some healthy snack alternatives for celebrations:

- **Fruit Sundae Bar** – make your own fruit sundaes with fresh fruit and low-fat yogurt or sorbet
- **Fruit and Veggie Smoothies** – for a cool healthy treat, try a combination of frozen berries, kale or spinach and water
- **Roasted Chicken Fingers or Oven Fries** – roasted chicken or potatoes are a good alternative to fried options
- **Popcorn Bar** – make your own popcorn with Italian seasonings, cinnamon, Cajun spices, lime zest or coconut oil
- **Fresh Fruit and Vegetables** – always provide a few healthy options, including easy-to-grab cut-up pieces of produce
- **Water** – replace sugary drinks with infused water. Ideas include watermelon/mint or orange/strawberry – get creative with the flavors!

In addition to healthy snacks at school functions and celebrations, this can also be an opportunity to shift the focus from food to physical activity. Turn on some music and have a dance party! Play some old-fashioned lawn games like three-legged races! Set up a scavenger hunt to keep the children active and entertained! Being healthy is a reason for celebration – so eat smart and encourage movement!

Nutrition

Kindergarten Lesson 3 High vs. Low Quality Foods

Draw a **rectangle** around the **high-quality** foods that are in the vegetable group

In lesson 3, Kindergarteners learned about how to tell if a food is high quality or low quality. The students became more familiar with the food groups and participated in a food sorting activity to decipher whether various foods were high or low quality. Students practiced drawing shapes around high quality foods that are close to nature's source and minimally processed.

Edamame

The Kindergarteners utilized their senses to taste edamame in pods. Edamame is a healthy snack that is rich in protein, fiber, iron, and vitamins A and C. It is fun to eat from the pod and will keep your kids energized!

At Home Tips

When choosing snacks or meals at home, practice identifying if the food is high quality or low quality with your kindergartener. Kids may reach for chips, cookies or processed foods, but reminding them about what they learned in their lesson may encourage them to eat more high quality foods like fruits and vegetables.

Garden

Lesson 3 - Composting

In garden lesson 3, the students learned about the importance of composting. The students participated in the process of composting and learned that composting and recycling are ways that we can limit the amounts of trash in landfills and lower pollution. Kindergarteners did a sorting activity to decipher compostables, recyclables, and trash.

Garden Tips at Home

Composting can be practiced at home too! If you have your own garden, you can easily create your own compost to enrich your soil. Just chop up your kitchen produce scraps and put them in a "kitchen composter" (or just a container with a closing lid). In a separate container, save torn up brown materials (paper towel rolls, toilet paper rolls, brown paper bags, dry leaves). At the end of each day, add 1 part green materials to 2 part browns into either an outdoor composter, or a ventilated trashcan (with a lid) dedicated just to composting. Give it a sprinkle of water to aid in mixing, and stir! Continue to add the new materials on top. When the bottom layer is broken down, it's ready to use!
